EDUCATION

Boston University

B.S. Computer Engineering (Concentration Machine Learning)

Boston, MA

Sept 2023 - May 2027

- Relevant Coursework: Software Engineering, Computer Architecture and Algorithms, Machine Learning, Cybersecurity

SKILLS

Languages/Frameworks: Python, Java, C++, JavaScript, C, HTML/CSS, SQL, MATLAB, Flask, Django, Spring, React

Tools/Databases: VS Code, Cursor, Github, BitBucket, Linux, SQL, MongoDB, PostgreSQL, SQLite, Pinecone

Certifications: Google Cybersecurity, IBM Generative AI Engineering, IBM Machine Learning with Python

Core Competencies: Machine Learning, Generative AI & LLMs, Cybersecurity, iOS Development, OOP, REST API

RESEARCH EXPERIENCE

Boston University H2X Lab

Research Assistant

Boston, MA

May 2026 - Present

- Developed a system to process multimodal sensor data from Meta Glasses using a Fine-Tuned TinyLLaVA Model.
- Architected a natural language interface and personalized navigation assistance from LLM interpretation of the vicinity.

Boston University AI Safety & Alignment (AISA)

Technical Fellow

Boston, MA

Feb 2026 – Present

- Researched AI safety and mechanistic interpretability to identify and fix vulnerabilities in machine learning models.
- Explored the intersection of cybersecurity and AI alignment by preparing technical pitches and project implementation.

WORK EXPERIENCE

Cognizant Technology Solutions

Artificial Intelligence & Analytics Intern

New York City, NY

June 2026 - July 2026

- Engineered a Databricks Workspace Admin Portal utilizing Medallion Architecture (Bronze/Silver/Gold) and Unity Catalog, building a daily automated ETL pipeline to streamline live data access and administrative authorization.
- Architected "Aerotracer," a Pydantic AI multi-agent system utilizing dynamic SQL/hybrid vector retrieval via PostgreSQL, reducing airline information and reporting costs by 99% and latency from 3 days to under 30 seconds.

Cyware Labs Inc.

Artificial Intelligence Engineer

Jersey City, NJ

Mar 2025 - June 2025

- Built an AI platform that automatically reads API specifications to generate functional connectors for 1,000 endpoints.
- Implement adaptive ML models within the Cyware Orchestrate platform, improving efficiency and response times.

1Kosmos Inc.

Cybersecurity Engineer Intern

Silicon Valley, CA

Aug 2024 – Nov 2024

- Integrated AI models into the BlockID App to improve biometric authentication and security for enterprise clients.
- Developed an identity management system, increasing user verification speed by 40%, and secured access for users.

Bahwan CyberTek Inc.

Software Developer Intern

Boston, MA

June 2024 – Aug 2024

- Built/optimized RESTful APIs in Java, cutting response times by 25% for a web portal supporting over 1,500 projects.
- Scaled backend operations using PostgreSQL and streamlined agile workflows to deploy new features 20% faster.

PROJECTS

[TrueFace](#) (HackDartmouthXI) | Python, MongoDB, AI/ML |

April 2026

- Engineered an engine that evaluates live audio/video to detect deepfakes, synthetic manipulation, and AI assistance.
- Built a full-stack platform integrating Gemini AI and HeyGen SDK to power a low-latency, conversational AI avatar.

[Courtside Inference](#) | Python, Machine Learning, Data Analytics |

Jan 2026

- Built a data-driven prediction model to calculate win probabilities and forecast outcomes for live NBA games.
- Processed and analyzed historical sports datasets to support strategic analysis and predictive modeling.

LEADERSHIP

BU Cybersecurity Association (BU CyS)

President

Boston, MA

May 2025 – Present

- Directed the organization's tech initiatives and students to build practical skills in network defense and threat analysis.
- Developed hands-on workshops focused on penetration testing and cybersecurity principles for university members.
